

Manuell turning lathes

WEMA ALPHA OPTIMO Wood turning lathe

We extended our programme of hand lathes and added the **WEMA ALPHA OPTIMO** to our **ALPHA**, **BETA** and **GAMMA** hand lathes. A specialty of this lathe is that you can turn the head stock 180°.

By support of an external bed you can use this lathe as head-lathe. Maximum diameter 750 mm.

WEMA ALPHA 200/250 Manuell lathes

Manual lathes of the series **WEMA ALPHA** are solid machines for professional use, with their benchbeds made of grey cast iron and their structures also made of high-quality grey cast iron. Heavy welded steel plates form the columns of these machines.

The motor is held in moving bearings on a rocker in the left column, and transmits the rotational motion via a robust poly-V-belt onto the four-step pulley of the shaft in the headstock.

WEMA BETA 200/250 und GAMMA 250/300 Manuell lathes

BETA 200/250 und GAMMA 250/300

Manual lathes of the series **WEMA BETA** and **GAMMA** are solid machines for professional use, with their benchbeds made of grey cast iron and their structures also made of high-quality grey cast iron.
